

# SURGICAL SCHEDULING PROCEDURE LIST

Improve your OR workflow by enhancing your EHR with the most efficient, standardized documentation templates available.

## Accuracy

Out-of-the-box EHRs might come with basic perioperative procedures, but only AORN Syntegrity provides complete access to thousands of procedures, all of which are referenced to:

- CPT®
- ICD-10-PCS
- SNOMED-CT®

Additionally, our procedure list is maintained and updated by perioperative clinicians who work in the field. This means you'll never be out of step with the timeliest, most accurate, world class operating room procedures.

## Efficiency

Nurses don't want to spend their important time sifting through improperly labeled, out-of-date procedures. They want to be treating patients with the right procedures at the right times.

The AORN Syntegrity procedure list helps ensure more accurate searches for scheduling procedures, and provides preauthorization assistance that can save your organization time and improve your reimbursement processes.

## Cost Reduction

Time is money. And in the operating room, time can also be a matter of life and death. Our procedure list enables your team to:

- Communicate using standardized language
- Quicken scheduling search capabilities
- Ensure procedures are performed in the correct setting

At the end of the day, this saves time and enhances patient safety. In other words, AORN Syntegrity can save you money.

Choose AORN Syntegrity procedures to standardize communication, streamline scheduling, ensure patient safety and reduce costs.
